

Hot and Cold Climates of the World

Hot and Cold Climates

What is the difference between weather and climate?

Weather

Weather is the day to day changes that we see happen. So, it can be sunny one day and rainy the next.

Climate

Climate is the average weather usually taken over 30 years for a particular place.

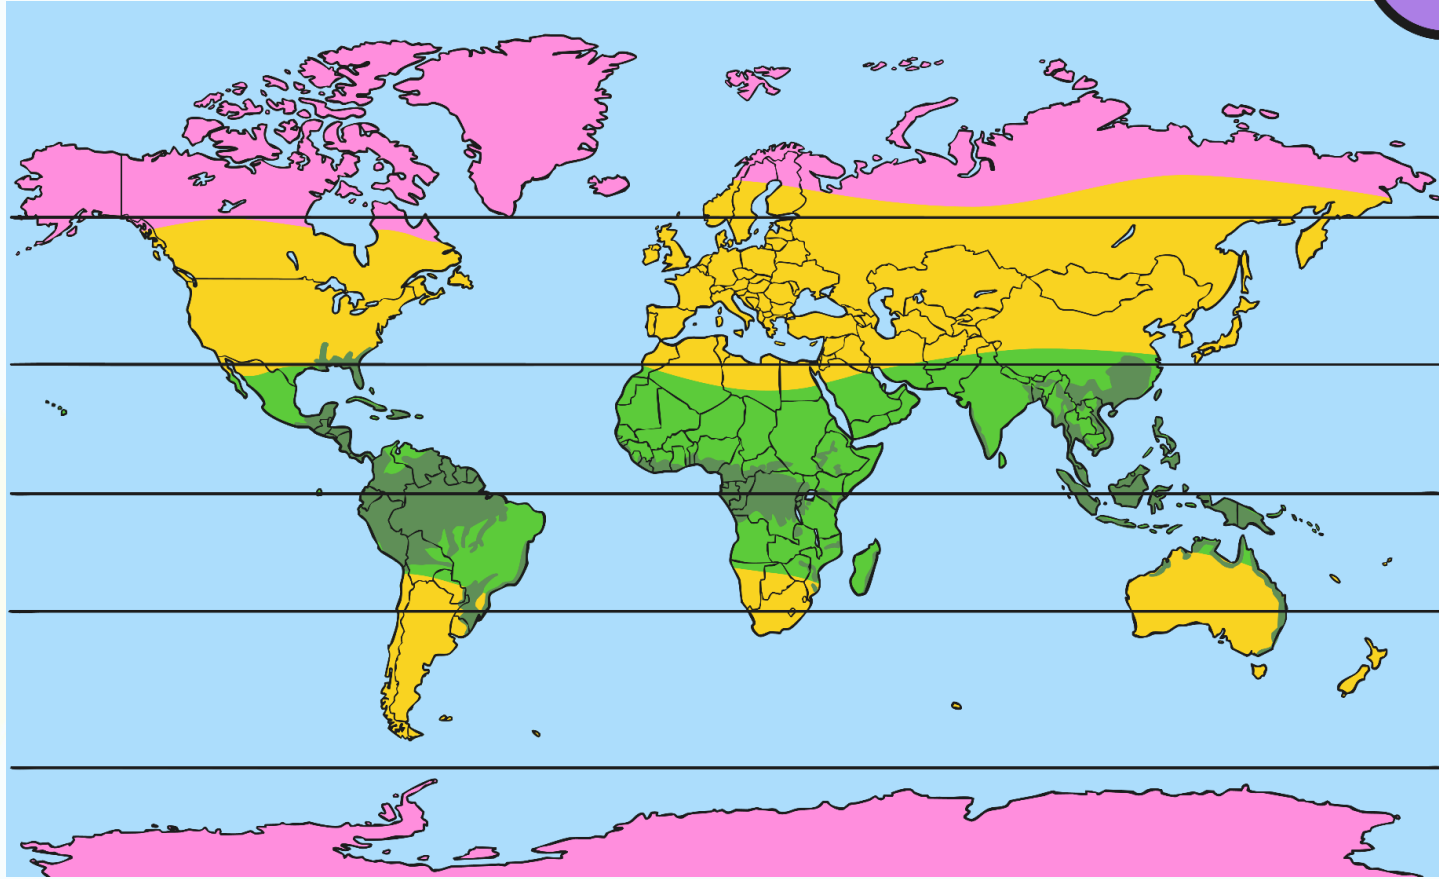

What is the weather like in our country?

Is it hot / cold / changeable?

What would you like our weather to be like?

Countries have different types of 'climate' around the world; they can be **hot** or **cold**.

Hot and Cold Climates

Cold or Polar Climates

Finland

Arctic

Norway

Greenland

Mapping the World's Climates

Use your activity sheet to colour code the climate zones of the world use a key to label the different climates.

Polar Bears to Pandas

What animals live in **hot** countries?

What animals live in **cold** countries?

Where Do They Live?

Using your activity sheet, cut out and stick the animals in the correct climate zones on your world map.

Where do the animals live? You could use an atlas and the Internet to help you.
