

Maths

TTRS: Soundcheck

I can solve comparison, sum and difference problems using discrete data.

Fluency: This chart shows how many house point achieved by various teams.

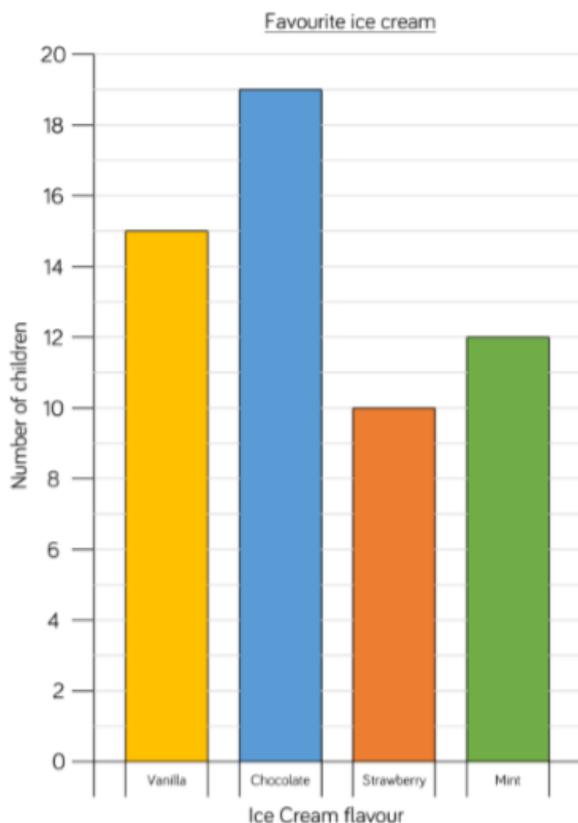

How many more points does the Sycamore team have than the Ash team?

How many points do Beech and Oak teams have altogether?

How many more points do Ash need to be equal to Oak?

Reasoning/Problem solving

Mrs Bilevych says, "54 people were asked their favourite ice cream altogether."

Can you spot the mistake? How many people were asked altogether?

# Year 4 Home Learning Pack Summer 2 Week 1 Day 3

Attraction	Number of visitors on Saturday	Number of visitors on Sunday
Animal World Zoo	1,282	2,564
Maltings Castle	2,045	1,820
Primrose Park	1,952	1,325
Film Land Cinema	2,054	1,595

True or False?

The same number of people visited Maltings castle as Film Land cinema on Saturday.

Double the number of people visited Animal World Zoo on Sunday than Saturday.

The least popular attraction of the weekend was Primrose park.

## English

**Spelling:** The 'sub-' prefix usually means under. For example, if we use a subheading, it goes under the heading or title.

### Definition:

subheading - a heading given to a subsection of a piece of writing

Choose one of the other 'sub-' words and write its definition. You may wish to use the internet, a dictionary or to discuss with an adult to help you.

I can retell the story from the point of view of a character.

### BLP - Imitation

<https://www.literacysshed.com/roads-end.html>

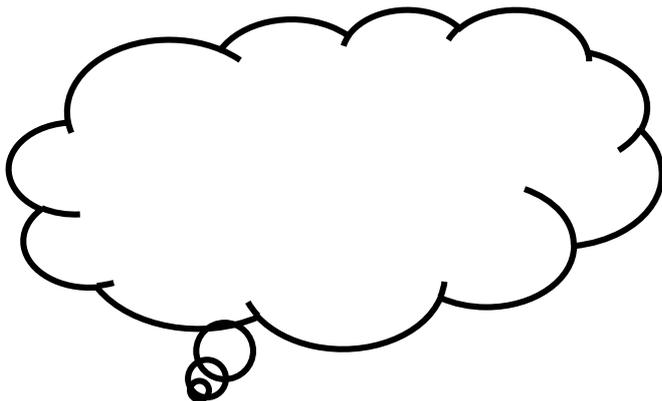

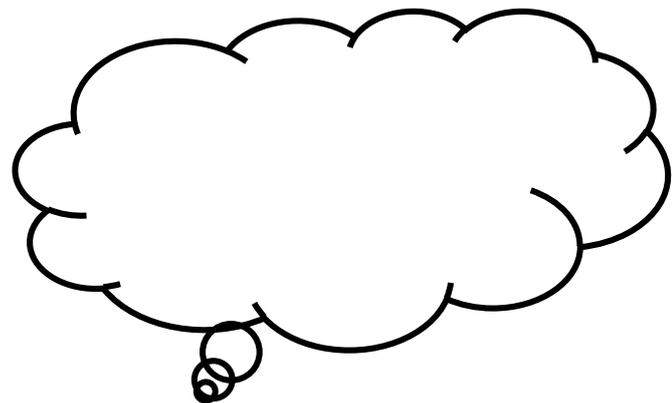

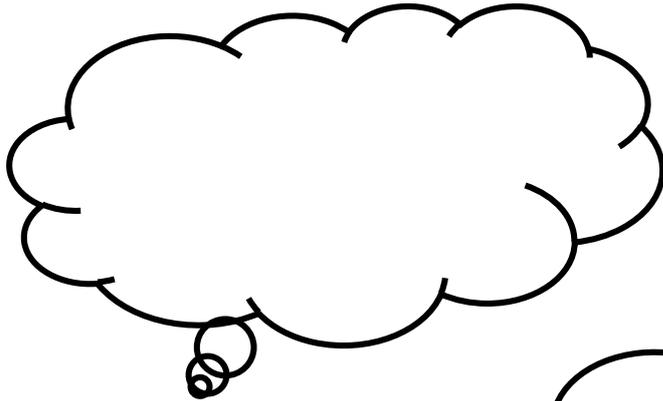

Looking back at yesterday's work on the emotions of the driver, for today's task you will be writing a one-sided conversation from the thoughts going on in the driver's head, whilst he is in the car.

Re-watch the clip to remind yourself what is going on. What could the driver be thinking?

# Year 4 Home Learning Pack Summer 2 Week 1 Day 3

*Is he scared? - What could be going round in his head? Is he confused? -  
Thinking why is this man here? Is he wondering why the man won't talk? -  
Has something bad happened?*

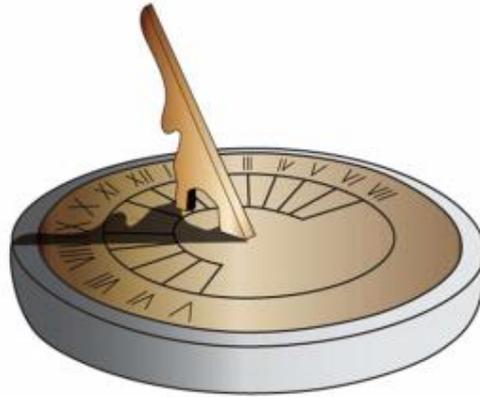

*Use all the questions that you would have, if you were the driver, to draw and fill in thought bubbles in first person from the driver, based on the 'conversation' he could be having with himself in his thoughts.*

Science: I can create my own sundial

Materials:

- ☐ Straight stick about two feet long
- ☐ small rocks or small seashells
- ☐ a watch
- ☐ chalk (optional)
- ☐ Sand (optional)
- ☐ Bucket (optional)

Instructions:

1. Find a sunny spot and push the stick vertically straight into the grass or earth. If your backyard doesn't have any grass or earth, fill a small bucket with sand and place your stick into the bucket.
2. Start in the morning when the sun is up. At 7:00 am use a small rock or seashell to mark where the shadow of your stick falls. Come back at 8:00am, 9:00am, 10:00am, and so on until there is no more daylight in the day. You may want to mark your pebbles with the time they were placed using chalk.
3. By the end of the day your sundial will be complete.

How it Works:

The sun's light will make your long stick cast a shadow. The shadow will change its angle depending how the sun's light is hitting the stick because our earth is constantly rotating and revolving around the sun.

Extra Experiments:

1. Measure how long the shadow that is casted by the stick is. Measure it in winter and spring. Are the measurements different? Which season has the longer shadow?
2. Make a second sun dial after we reset our clocks each year. How are the two sundials similar? How are they different?
